## Resources in Spanish / Recursos en español

### Bienvenido a las páginas en español de la Red EQUATOR

Estas páginas han sido desarrolladas en colaboración con la Organización Panamericana de la Salud (OPS/OMS), con quienes estamos trabajando para promover el informe responsable de las investigaciones para la salud, especialmente en las Américas.

Los recursos listados a continuación han sido traducidos al español (aparte de la base de datos de directrices para informar y publicar investigaciones).

## Guías Equator

---

*Equator network* nos ofrece la compilación de las guías de reporte que se utilizan para escribir artículos científicos con fines de publicación.

---

También pueden aplicarse desde la planificación del estudio o durante la revisión editorial para evaluar la calidad del reporte.

# EQUATOR Reporting Guideline Decision Tree

## Which guidelines are relevant to my work?

None of the most popular checklists are appropriate for your study design, but you may still find useful guidelines by searching the full EQUATOR library, which covers 250+ study designs.

### Standards for reporting qualitative research: a synthesis of recommendations.

O'Brien BC<sup>1</sup>, Harris JB, Beckman TJ, Reed DA, Cook DA.

#### Author information

#### Abstract

**PURPOSE:** Standards for reporting exist for many types of quantitative research, but currently none exist for the broad spectrum of qualitative research. The purpose of the present study was to formulate and define standards for reporting qualitative research while preserving the requisite flexibility to accommodate various paradigms, approaches, and methods.

**METHOD:** The authors identified guidelines, reporting standards, and critical appraisal criteria for qualitative research by searching PubMed, Web of Science, and Google through July 2013; reviewing the reference lists of retrieved sources; and contacting experts. Specifically, two authors reviewed a sample of sources to generate an initial set of items that were potentially important in reporting qualitative research. Through an iterative process of reviewing sources, modifying the set of items, and coding all sources for items, the authors prepared a near-final list of items and descriptions and sent this list to five external reviewers for feedback. The final items and descriptions included in the reporting standards reflect this feedback.

**RESULTS:** The Standards for Reporting Qualitative Research (SRQR) consists of 21 items. The authors define and explain key elements of each item and provide examples from recently published articles to illustrate ways in which the standards can be met.

**CONCLUSIONS:** The SRQR aims to improve the transparency of all aspects of qualitative research by providing clear standards for reporting qualitative research. These standards will assist authors during manuscript preparation, editors and reviewers in evaluating a manuscript for potential publication, and readers when critically appraising, applying, and synthesizing study findings.
